

Abstract

A cooking apparatus having an enclosure that consists of a bottom wall, sidewalls, back wall and a partial front wall.

You have a cooking rack that rest on top of the enclosure. Below the cooking rack you have a waterproof container that consist of bottom wall, sidewalls, back wall and a front wall that holds the charcoal rack for burning charcoal or wood.

The charcoal rack is centered in the center of said container. Rails located inside the container support the charcoal rack.

The enclosure also has rails positioned inside of said enclosure for holding said container.

The said enclosure partial front wall is used for sliding container in or out of the said enclosure.
